

Brace PLUS™

COMFORT & SUPPORT
following cardiothoracic
surgery

Easy-to-adjust
sternal support
band

Comfort & Support.

BracePlus™ is a post-operative sternal support band designed to assist patient recovery following cardiothoracic surgery.

Reduces stress on the sternal closure.

Protects the integrity of the surgical wound.

Provides patients with the confidence to cough deeply.

Helps patients regulate pain management.

Encourages early mobilisation to speed up recovery.

Unique design

BracePlus™ has a unique design ensuring that the chest and healing sternum are supported at all times without restricting normal breathing.

How it works

After an introduction by medical staff the patient can use BracePlus™ without any help.

With a one handed simple manoeuvre it can be tightened, secured and released again.
